FOR IMMEDIATE RELEASE

Port St. Lucie, Florida, March 1st, 2009

ZERO VOC CLEAR CONCRETE SEALER

**Enviroseal introduces a truly Zero VOC
One component clear concrete and masonry sealer**

Until recently, contractors and architects that specified or used a zero VOC clear concrete sealer had to rely on a two component system that is flawed by the end result not being a truly zero VOC product. In recent years, low and zero VOC products have become mandatory on numerous construction projects and clear concrete sealers are no exception. A clear concrete sealer is used to prevent damage to various masonry surfaces by protecting them from rain, sun, salt, oil, rust, and other types of destruction.

The need for a truly zero VOC ready to use product that is environmentally friendly and affordable is long overdue and has been achieved by Enviroseal Corporation of Port St. Lucie, Florida.

“Building with Green Technology is a responsibility we all share”, says Andy Stevens, Vice President of Enviroseal. “Our latest product, Duraseal ZERO™ is revolutionary in the fact that it is a high quality waterborne product that is both durable and economical, and best of all, it is ready to use. Duraseal ZERO™ is a high quality Zero VOC clear concrete sealer that is excellent for use in residential, commercial, and institutional applications.”

About Enviroseal Corp:

Enviroseal is the manufacturer of environmentally friendly products serving geotechnical applications and a line of sealers for concrete, roofing, and asphalt surfaces. Since 1995, they have been recognized as an industry leader in soil stabilization and dust control on civil and military projects worldwide. With their expertise, they have developed products that are “Green Rated” and user friendly to produce sealers that treat a variety of substrates. We are Members of the USGBC and work close with LEED Builders around the country. Further information is available on their website www.enviroseal.com or contacting them directly at
